Continuation of 3. NOTE: the proposed phrase "indicates the potential of the composition to counteract the phenotype resulting from degradation of the Type II collagen in ioints of a transgenic non-human mammal" in claim 90-96 would require a 112/2nd rejection not previously required. A phenotype must be obtained in the mice upon activating expression of MMP (step b of claims 90-96); however, the phrase in question implies the composition may prevent the phenotype from occurring. The claims should clearly delineate which results indicate a compound has potential to counteract the phenotype in step b) or simply to counteract the degradation of type II collagen as in the preamble of claim 90. The phrase in question was not part of the proposed claims discussed in the interview on 2-7-05
